

Aquatherm Greenpipe
Fire Sprinkler Systems

aquatherm

Multipurpose sprinkler systems provide both domestic water and fire protection.

Multipurpose sprinkler systems combine fire protection with potable water, providing increased safety without adding a secondary system. Multipurpose systems are easier to test and maintain than independent systems and are simpler to install. Multipurpose systems can be installed in one and two family residences. As of January 2011, states adopting the current IRC will require new one and two family residences to have install fire sprinkler systems.

Greenpipe FM can be used as concealed sprinkler piping in light hazard occupancies, such as:

- Clinics
- Homes
- Clubs
- Theaters
- Churches
- Schools
- Hospitals
- Libraries
- Museums
- Office
- Nursing homes

Aquatherm Greenpipe is made from polypropylene random (PP-R) and offers many advantages, including:

- Safe, clean, non-leaching material
- Strong, leak-free connections
- Higher flow speeds for faster delivery
- A conventional (tree type) system
- Fast installation and/or repairs
- Minimal pressure loss
- Resistance to freezing, impact, and hard water
- Over 50 years of service life
- Environmentally friendly pipe and fittings

Aquatherm Greenpipe provides safe, reliable day-to-day service for domestic water, while delivering high-volume sprinkler protection if the need arises.
